

Epson Refillable cartridge refilling instruction

Step 1: refillable cartridge and refill kit

Take out the rubber of the ink refilling hole

Use 10ml syringe, suck 5ml ink into the kit

Step 2: Refill ink

Insert the syringe into the Ink refilling hole.
Make sure the syringe is plugged well into the ink Refilling hole. Otherwise it is hard to refill.

Pull **up** the syringe, and make it about 5ml up from the ink level as the picture shows.

Stop pulling up, ink will flow into the refillable cart.
Make sure not push down the syringe.
If like that ink will spout out of the cartridge

Do the same steps till ink refill is full of the cartridge.

Step 3: Finished

Refilling finished, please put the rubber back on Ink refilling hole.
And take the rubber out of the air hole when you print.

Notes:

Above are our new refillable cartridges. After you use once, if you want to Refill ink, it is very easy.
Please take off the two rubbers, use syringe to pour the ink refills into the cartridges. That is ok.
